Subject: Dimock - Round 2 Metals Data, Re-analysis of Lithium Results and Radiation Data

As you know, EPA expects to provide the remaining data to residents shortly. As such, I am following up on your review of the following:

- Round 2 metals data for the four residential wells re-sampled in May
- Re-analysis of lithium at the lower QL of 25 ug/L for the 57 residential wells sampled in January/February
- Rad data for first 61 residential wells sampled from January - March

We had a call on Monday with Terry to discuss the Rad data. We are currently working to address Terry's concerns. We are also working on the final report format for all of the above residential data reports.

I wanted to touch base to see whether you expect to submit any additional technical comments regarding the above referenced data. If so, we would appreciate your comments by COB tomorrow - July 12th.

Please note that the QA review of the data for the three wells sampled as part of Supplemental Round 1 in May is ongoing. In addition, the analysis/review of the data for the additional sampling conducted at HW-8a and HW-8b for manganese is ongoing. We anticipate providing this data to you for your review next week.

Please feel free to contact me with any questions you may have regarding this matter.

Thanks for your help - Kelley
